MOLI Assessments

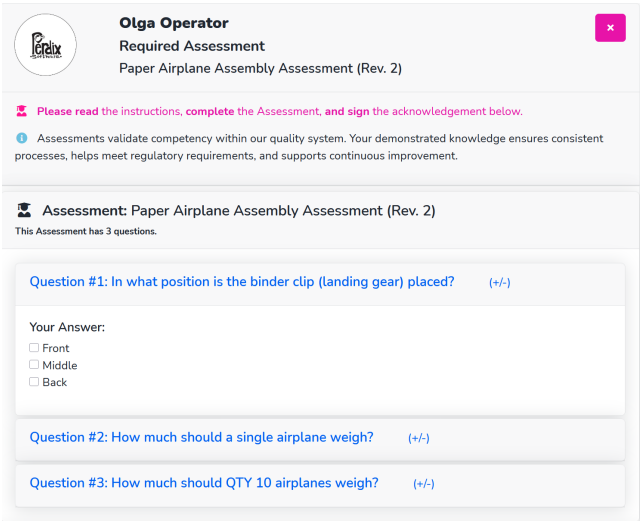
prove operator competence automatically

Customizable digital quizzes that generate permanent compliance records automatically.

Prove Operator Competence. Automatically.

Attach assessments to any instructions — training is verified where it happens.

Flexible scoring with configurable pass thresholds and built-in remediation workflows keep your team sharp and your records clean.



BUILDING AND DELIVERING ASSESSMENTS

Create assessments using true/false and multiple-choice questions. Multiple-choice questions support an extended description, and grading can require all correct answers or accept any one of them — configurable per question.

Assessments carry their own revision field and link directly to a set of instructions. When an operator loads those instructions at a kiosk, the attached assessment triggers automatically. If Job Reassessment is enabled, the assessment requirement resets with every new job, producing a discrete, per-build assessment record.

Assessments must be approved before operators can take them. Once approved, the record is locked for editing, protecting the integrity of your compliance documentation. Clone and revise when the process changes.

SCORING AND PASS THRESHOLDS

A system-wide minimum passing score is set in Training Configuration. Individual assessments can override this threshold.

Scores are calculated and recorded the moment the operator submits. A passing result is automatically resolved and written to the record. A failing result is flagged as unresolved and — if configured — requires supervisor resolution.

REMEDIATION AND SUPERVISOR RESOLUTION

When Require Failure Resolution is enabled, a supervisor must reauthenticate at the kiosk and formally resolve a failed result. A resolution comment is required and written to the record. Operators cannot resolve their own failures — the system enforces the second-person requirement automatically.

If Same-Kiosk Certification is configured, the supervisor must resolve at the same physical kiosk where the assessment was taken, ensuring that re-training was delivered in the right location.

INTEGRATED LOGGING AND AUDIT COMPLIANCE

Every assessment result — pass, fail, resolved, or pending — is stored permanently, timestamped, and tied to the operator, assessment version, instructions version, kiosk, and job — satisfying audit requirements for documented evidence of competency across regulated industries.

INTEGRATED PHOTOGRAPHY

All MOLI Certified Kiosk Devices can take pictures as part of Assessment workflows.

Camera behavior is independently configurable for the assessment event and the resolution event: none, automatic snap, prompted photo, or both — for environments where photographic evidence of the assessment is required.

📺 MOLI Digital Signage Integration

All unresolved assessment failures appear on the "Unresolved Assessments" Digital Signage panel.

🚦 MOLI Smart Stacklight Integration

When assessment failures are unresolved at a workcenter, its stacklight color pattern includes **BLUE**.

📧 Email Integration

MOLI can send hourly emails listing all unresolved assessment failures — to shift supervisors, a list of additional recipients, or both.
