

MOLI Information Classification

markings, export control, and foreign-national awareness

Know what's sensitive. Everywhere it shows up.

CUI, ITAR, NATO, or a simple Public / Internal / Confidential / Restricted scheme: apply a classification marking to any record in the system, from a Job traveler to a Form response to an uploaded drawing.

Once a record is marked, the marking travels with it: the right badge on every screen, the right banner on every printed page and PDF export.

HOW IT WORKS

Any record can carry a classification marking under whichever scheme fits your environment: **CUI** (Basic or Specified), **U.S. National Security** (Confidential / Secret / Top Secret), **NATO**, or a straightforward **Corporate** scheme for organizations that want consistent internal handling rules without government-grade overhead.

Export control is tracked as its own dimension, separate from classification level. MOLI tracks the applicable program — ITAR, EAR, OFAC sanctions, or nuclear-material programs under NRC 10 CFR 110 / DOE 10 CFR 810 — and, for ITAR, the specific USML category that applies.

All colors for U.S. National Security, NATO, and CUI markings follow the published conventions auditors expect.

APPLIES TO ANY RECORD — AND FOLLOWS THE WORK

- Jobs, Items, Files, Forms and Form Responses — any record type in MOLI can carry a classification marking.
- Markings inherit and filter automatically: allows hybrid environments and automatic markings of related data.
- Guardrails keep markings consistent and prevent the application of invalid markings.
- Query and report on classification state and dissemination controls.

MOLI Visitor Kiosk Integration

Open a record marked **NOFORN** (Not Releasable to Foreign Nationals) and MOLI checks who's currently signed in through the **MOLI Visitor Kiosk** — surfacing a live headcount of foreign nationals on-site, broken down by citizenship. It's a caution indicator at the moment it matters, not an access lock: a quiet reminder to think about who's in the room before that screen turns the wrong way.
