

MOLI Instructions

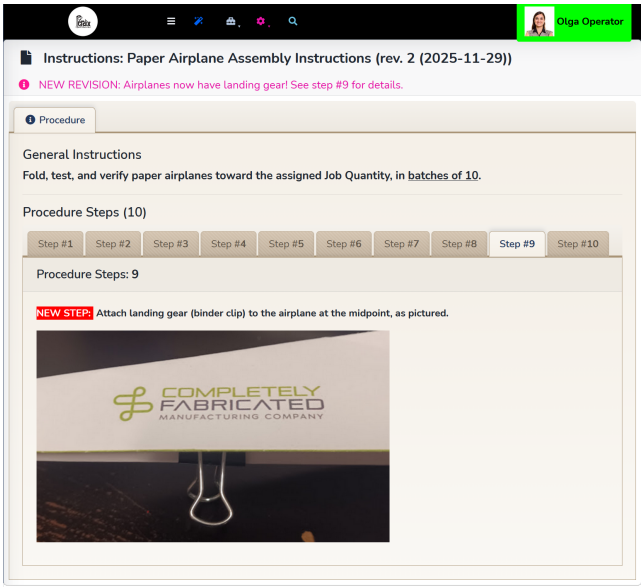

electronic work instructions delivered where work happens

Right Instructions.
Right Person.
Every Time.

MOLI Instructions replace paper travelers and shared-drive documents with revision-controlled, role-filtered EWI delivered at the point of work.

Role-specific, revision-controlled, template-driven instructions ensure consistency.

Only the instructions relevant to the logged-in roles and current job are shown.

HOW IT WORKS

Instructions are authored using templates — structured forms that enforce consistent formatting across your operation. Each set is scoped to an item, machine, workcenter, operation, and role. Operators at the kiosk see only the instructions relevant to them and their current job.

Instructions carry a revision label and revision date. An approval workflow locks instructions after sign-off. When a revision changes, prior training records are preserved — and operators are re-routed to re-verify if your policy requires it.

🎓 Pairs with MOLI Assessments and MOLI Training Verifications

Attach an assessment to any set of instructions and training becomes a scored competency event. Require acknowledgement or supervisor certification and every operator sign-off becomes a permanent electronic record.
