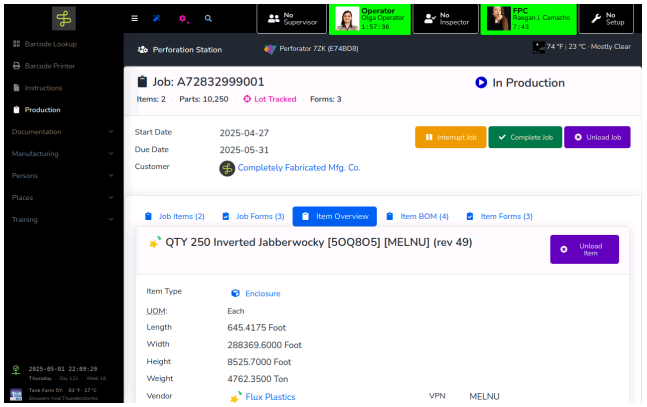
MOLI Items

digital profiles for everything your operation handles

Raw materials, components, and finished goods — with critical attributes, BOMs, instructions, and traceability built in.



Every item carries its linked work instructions, quality forms, and critical attributes — available at the workcenter when the job calls for it.

Full barcode support and interlinking throughout MOLI ensure that key traceability connections work for you.

HOW IT WORKS

- **Define all metadata** for each revision of your Items.
- Items can be **synced from your ERP System** with a MOLI Integration, eliminating the need to enter them manually.
- **Add a BOM (Bill of Materials)** to each Item, including parts, assemblies, and raw materials.
- **Link in other content**: Add documents, files, photos, and videos from your MOLI File Libary.
- When an operator **loads a Job containing the Item**, your full specification will be available.
- **Attach Instructions your your Item** to deliver an Assessment or trigger Training Verification, too.
