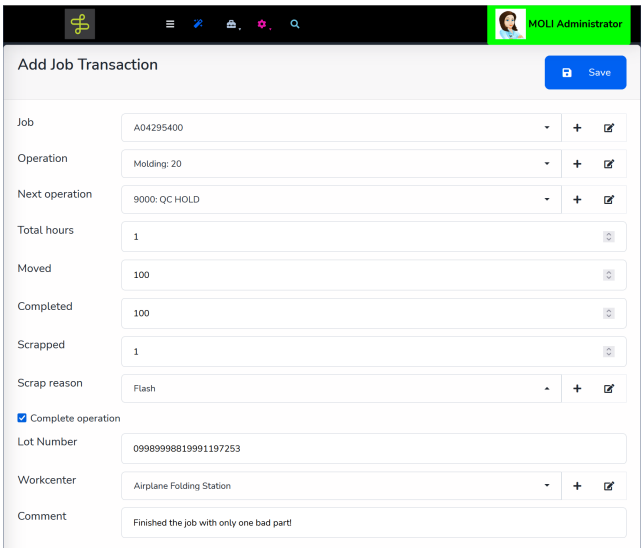
MOLI Job Transactions

real-time production recording that feeds your ERP automatically

Good parts, scrapped parts, scrap reasons — recorded at the moment they happen, cross-referenced across systems.

Good scrap data with reasons is the foundation of meaningful continuous improvement.

In MOLI, First Pass Yield updates live. Transactions sync back to your connected ERP, eliminating the manual re-entry that introduces errors and lag.



HOW IT WORKS

MOLI provides interfaces for operators to enter part counts, including scrapped parts by scrap reason.

As Good / Not Good parts are counted and contained during the manufacturing process, MOLI Job Transactions create an interlinked record of counts with scrap reasons regardless of source.

- Operators report good parts + scrap at each workcenter…
- Machines automatically report scrap via their APIs…
- Another system is aware of yet more scrap…

As transactions are recorded, MOLI keeps everything updated, and lets you get the complete picture.
