

MOLI Machines and Workcenters

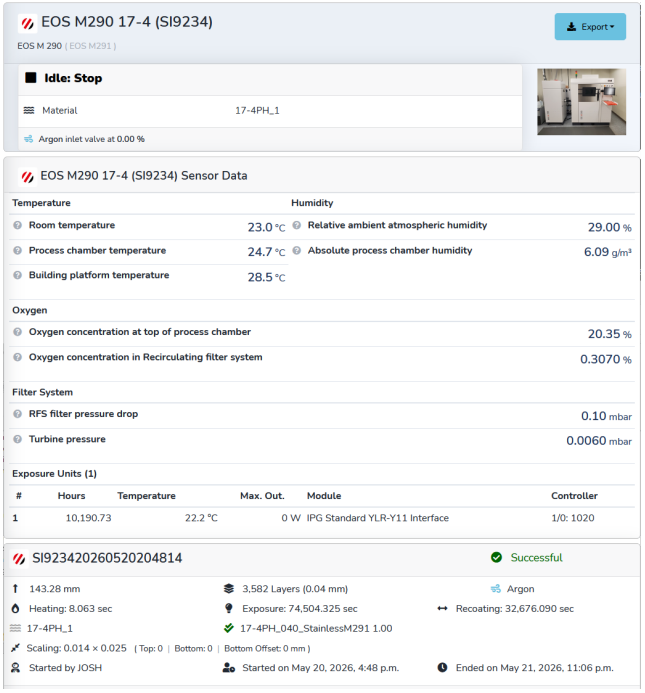

digital representations of your production floor with the intelligence to match

Intelligent Job Routing, Status, and Machine Integrations.

Jobs route to the right machine based on real-time status — operators receive exactly what they need to do the work, when they need it.

Everything that happens at a workcenter is captured, contextualized, and available for review and integration.

Machine API Connections and **ERP Integrations** work together to create a common data fluency — giving you unique insight into data from multiple systems.

HOW IT WORKS

MOLI intelligently **routes available jobs to your Workcenters and Machines** based on status and completion information.

As team members sign into stations, the system **automatically delivers role-specific documentation**, work instructions, training materials, and data entry interfaces. This contextual delivery ensures processes are followed correctly while **capturing critical production data at the source**, eliminating paper-based inefficiencies and increasing visibility into production.

Machine API connections unlock the data already inside your equipment — bridging automatic counts, operator entries, and ERP transactions without manual reconciliation.

AVAILABLE MACHINE INTEGRATIONS

ARBURG · DMG MORI · ENGEL · EOS · HAAS Haas Automation Inc. · Mazak · MTCONNECT POWERED BY AMT · OKUMA OPEN POSSIBILITIES

Contact Perdix Software for a machine compatibility assessment. MOLI can communicate with machines using standard protocols — including MTConnect, EUROMAP, MQTT, OPC UA, Modbus, HTTP / REST — and a low-level serial drip.
