
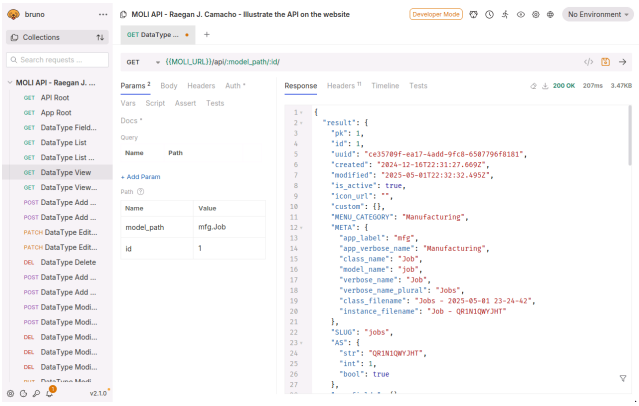
MOLI Personal API

user-scoped API access with ready-to-run integration examples



Grant power users personal access to the MOLI API.

Each API key ships with a pre-populated Bruno™ API Client Collection scoped to its exact permissions — integration starts in minutes, not days.

Secure, auditable, and granular: give each integration exactly the access it needs and nothing more.

HOW IT WORKS

- Power users can create Personal API Keys — each permission-scoped to a subset of their account permissions.
- Each key includes a downloadable Bruno™ API Client Collection to test and develop against the API.
- API access via JSON or XML — same payload shape as the matching MOLI Export Format, so nothing is a surprise. Ask for either with `?format=` or a plain `Accept` header.
- Browsable API endpoints are easy to navigate and provide a consistent interface.
