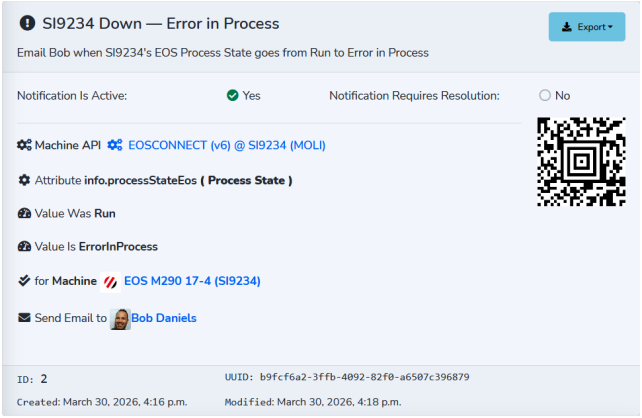
MOLI Production Notifications

triggered notifications based on job, form, or machine data changes

Reduce incident response times with timely automatic notification of problems seen in production.

Automatically receive notifications when manual (form), machine (API), or job action data meet certain criteria.

Track problems over time, identify their root causes, and determine necessary prevention steps.



HOW IT WORKS

Define **rule trigger criteria**...

- trigger when a **submitted form field value** meets criteria (equals, greater than, less than)
- trigger when a **job status** changes (e.g. In Progress → Interrupted)
- trigger when a **machine API value** changes (e.g. Running → Alarm)

Define **notification methods** for when your conditions are met...

Supports Email, SMS, Voice Call, or Voice Page notifications.
