

Microsoft Business Central

Integrations · ERP System

Put Business Central Production Orders on the floor and close them with transactions — automatically.
COSMO Advanced Manufacturing Pack supported.

Business Central on the Floor. Transactions Back — Automatically.

MOLI connects to Microsoft Business Central via the BC API, pulling Production Orders and routing them to the right workcenters. When operators record labor, material consumption, and output on the floor, those transactions post back to BC — no re-keying, no shift-end reconciliation.

For customers running the COSMO Advanced Manufacturing Pack, MOLI integrates with COSMO's Production Order Operations, enabling per-operation routing, time tracking, and material confirmation at the workcenter level.

KEY BENEFITS

- Production Orders sync from Business Central to MOLI — operators see current, accurate work queues without touching BC.
- Labor, material consumption, and output transactions post from MOLI back to Business Central.
- COSMO Advanced Manufacturing Pack support adds per-operation workcenter-level confirmation.

TECHNICAL DESCRIPTION

Bidirectional Production Order and Job Transaction sync between MOLI and Microsoft® Business Central®, with support for the COSMO® Advanced Manufacturing Pack.

Synced Entities: Items, Jobs, Job Transactions, Work Centers
