MOLI Software Bill of Materials (SBOM)

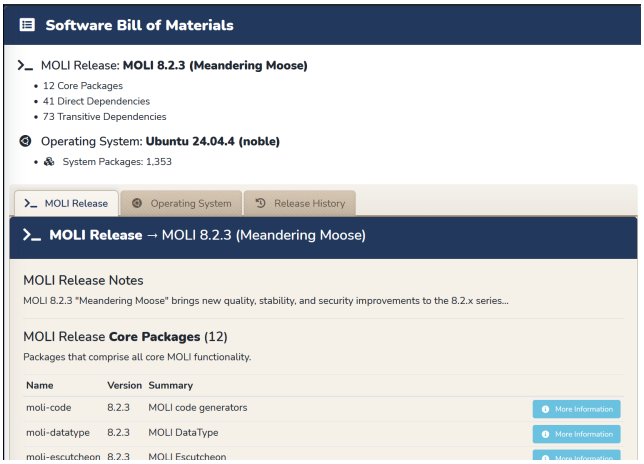
transparent, verifiable supply chain information for every deployment

Audit the software running on your MOLI System.

Every package, every dependency, every version — any time.

MOLI's Software Bill of Materials (SBOM) dashboard supports software validation requirements in regulated environments without requiring manual inventory efforts.

View detailed release notes and a comprehensive inventory of first- and third-party code running on your MOLI System.



HOW IT WORKS

On the System Status screen, you can view the currently-running version's release notes, all past release notes, and detailed information about all MOLI and third-party software packages running on your MOLI System.

Third-party dependencies are thoroughly reviewed and approved by the MOLI Codemaster before inclusion in the software. Updates to each direct dependency, and key transitive dependencies, are included with every MOLI Release.

MOLI is pinned to the LTS (Long-Term Support) versions of our Operating System (Ubuntu) and Framework (Django).

✅ The SBOM isn't just an artifact — it *built* your MOLI System.

Each package in the SBOM — whether proprietary MOLI Code or third-party / open-source code — was served to your MOLI System when it was built (or last updated) by a private package server: the MOLI Registry. The MOLI Registry houses authoritative copies of our MOLI Software builds as well as copies of all distributed third-party code, and distributes those packages at install-time to each MOLI System using the SBOM. This architecture insulates your MOLI System from several common types of software supply chain attack, insulates our build process from public cloud outages, and provides a repeatable build based on code of known provenance.
