Implementation Consulting and Deployment

Discovery · Configuration · Commissioning

Your current processes are the starting point. A better version of them is the destination.

Digitalization. Not Just Digitization.

Scanning your work instructions into a PDF is digitization.

Rebuilding them as live, interactive, version-controlled documents that guide operators step by step, capture data at each stage, and trigger notifications when something isn't right — that is digitalization.

Implementation Services exist to adapt your process to the digital medium. Your current processes — the documented ones and the ones that live in people's heads — become the blueprint for your MOLI deployment.

MOLI IMPLEMENTATION SERVICES INCLUDE

- **Discovery.** Implementation begins with your operation. We document your current workflows, work instructions, quality records, and escalation paths — on paper, in binders, or in people's heads.
- **Template Development.** Your work instructions, job travelers, checklists, and quality records are rebuilt using MOLI — live, versioned, and tied to your jobs and parts.
- **Workflow Configuration.** All primary routes, rules, approvals, trees, logic, and triggers are configured, documented, and tested.
- **Integration Wiring.** Activated integrations are connected and tested.
- **Commissioning & Go-Live.** Phased launches with on-site support each launch + iterative changes.

Your Process. Your Deployment. Your MOLI System.

No two MOLI deployments are configured identically, because no two manufacturing operations are identical. Implementation is not a configuration checklist — it is a translation. We learn how your plant works, then build the version of MOLI that fits it.
