Additional Project Services

Customizing · Extending · Building

When the standard configuration isn't quite the right configuration.

The MOLI System. Extended for Your Operation.

MOLI ships with a substantial library of modules, workflows, and integrations. Most deployments go live on the standard configuration. Some operations require something more specific — a custom integration with a legacy ERP, a specialty module for a unique production process. Project Services exist for those situations.

Project Services are scoped and priced per engagement — a defined scope, a defined deliverable, and a team that knows MOLI well enough to extend it without breaking it.

WHAT PROJECT SERVICES COVER

- **Custom Integrations.** Connections to ERP, MES, QMS, or other systems or devices beyond the standard integration catalog — including legacy, proprietary, bespoke, or on-premises platforms.
- **Specialty Module Development.** Workflow modules, data capture forms, export formats, tools, or automations built for production processes outside of the MOLI Core.
- **Signage, Reporting, and Dashboards.** Custom Digital Signage, reports, exports, and dashboards built around your specific KPIs and data structures.
- **System Migrations & Data Transformations.** Moving historical records, templates, or configurations from legacy systems into MOLI.
- **Compliance Validation Packages.** Specific customer-directed configuration, documentation, or validation support beyond standard implementation.

Scoped. Priced. Delivered.

Project Services begin with a scoping conversation. We define what is being built, what it will cost, and what "done" looks like — before any work begins. If you have sketches or can make an Excel prototype those are useful inputs to the process.
