Training Services

Train-the-Trainer · On-Site · On-Camera

Software you don't know how to use is not an asset. It is an expensive reminder to call us.

Close the gap between "installed" and "understood".

Perdix Software delivers MOLI training however your organization learns best.

The most common delivery model is train-the-trainer: Perdix trains your designated internal trainers, who carry that knowledge into your shifts. It is efficient, sustainable, and puts ownership of MOLI knowledge inside your operation — not dependent on us.

Other models supplement or burst training as needed.

TRAINING DELIVERY MODELS

- **Train-the-Trainer.** Perdix trains your designated internal trainers on MOLI operator workflows, administrator functions, and template authoring. Your trainers then own the rollout to their teams.
- **Direct Operator Training.** On-site training delivered to operators at the workcenter — shift by shift, workcenter by workcenter if needed.
- **Administrator & Configuration Training.** Deeper training for MOLI administrators on template authoring, workflow configuration, report generation, and system management.
- **Shadowing.** Perdix trainers work alongside your team during live production — answering questions in context, documenting edge cases, and reinforcing correct patterns as they happen in real conditions.
- **Video & Demo Production.** Structured recordings for new-hire onboarding, SOP reference, or self-paced training delivery — built around your actual MOLI templates and workflows, not generic demos.

Train-the-Trainer: The Standard Model.

The majority of MOLI deployments use train-the-trainer as the primary delivery model — it is usually the most effective. Your trainers know your shifts, your language, your floor. We give them the knowledge. They then deliver it in context with our materials.
